Firebase • Tailwind CSS

PROFESSIONAL EXPERIENCE

Frontend Engineer • RedDev | Remote

06/2025 – Present

Project: OMNI CRM, a centralized marketing platform for managing and optimizing Google Ads, Facebook Ads, and SEO campaigns from a single dashboard.

- Integrated Google Ads and Facebook Ads APIs to automate campaign management and surface real-time performance analytics.
- Built dynamic dashboards with interactive charts and configurable filters for tracking campaign ROI across multiple ad channels.
- Delivered responsive, high-performance UIs using React and Tailwind CSS, improving workflow efficiency and reducing page load time.
- Collaborated with backend teams on API contracts and data models to ensure seamless end-to-end campaign reporting.

Project: Verified CRM, an enterprise sales CRM for precious-metals (gold/IRA) businesses.

- Built purchase and liquidation sale-order UIs for both Cash and IRA order types, featuring dynamic metal product tables, pricing calculators, commission spreads, and order validation.
- Developed agent commission calculators, sales reports, payroll dashboards, and inventory and SKU management screens with PDF and Excel export using MUI Data Grid Pro.
- Implemented lead workflow tracking, milestone management, and role-based permissions across a React and Vite SPA with Redux Toolkit and Axios.

Project: Logical CRM, a large-scale enterprise CRM for home-service and field-service businesses.

- Developed features across lead management, job dispatch, sale orders, and user administration modules in a 900+ component enterprise React SPA serving field-service businesses.
- Built data-heavy reporting screens covering sales, commissions, transactions, and agent dashboards using MUI Data Grid Pro, Chart.js, and Excel export via ExcelJS.
- Integrated Google APIs including Gmail, Calendar, and Search Console alongside SMS messaging and real-time updates via Socket.io; contributed to multi-tenant white-label configuration for branded deployments.

Full Stack Engineer • Redbuffer | Islamabad

08/2024 – 02/2025

Project 1: Oliver AI, an intelligent document and email analysis platform.

- Built a full-stack MVP where users upload documents that are automatically processed to extract clauses and match them against relevant Gmail and Outlook emails using ML model outputs.
- Developed secure OAuth-based authentication and read-access flows for Gmail and Outlook integration, enabling real-time email retrieval and periodic re-syncing as new emails arrive.
- Engineered clause-level email grouping so that each clause in the document is linked to its corresponding email threads, giving users granular communication analysis.
- Built the frontend with Next.js and the backend using Python FastAPI and PostgreSQL; integrated ML model outputs for clause extraction, email grouping, and automated summary generation.

Project 2: Noble Royalties, a data management platform for oil and gas companies.

- Developed a platform enabling oil and gas companies to manage macro and micro level transaction data across wells, cracks, and sub-units within a dig site.
- Built document upload and dynamic spreadsheet creation features, allowing users to bulk-import operational data or manually construct structured data sheets.
- Designed scalable data models in PostgreSQL to handle hierarchical site structures and high-volume commodity transaction records for oil, gas, and related assets.

Software Engineer • Brainhub Labs | Islamabad

08/2023 – 05/2025

- Developed responsive web applications using React, Tailwind CSS, and JavaScript, optimized with Google Lighthouse for load times, accessibility, and SEO.
- Integrated RESTful APIs and managed application state with Redux Toolkit and TanStack Query, improving data processing speed by 30%.
- Implemented Firebase for real-time data sync and authentication, significantly reducing login latency across multiple client projects.
- Led frontend development of Quantl AI, a React Native trading app with real-time market APIs, React Native Gifted Charts, and Redux state management; deployed via TestFlight for beta testing.
- Designed and built a personal finance app featuring interactive financial visualizations using Chart.js for income, expense, and budget tracking.

Software Developer Intern • Brainhub Labs | Islamabad

02/2023 – 07/2023

- Developed responsive UIs from Figma designs using HTML, CSS, and JavaScript, and built animated business websites with smooth transitions.
- Integrated RESTful APIs and collaborated with backend teams on data contracts; managed code reviews and version control via Git pull requests.

KEY PROJECTS

Oliver AI | Full Stack: Next.js, FastAPI, PostgreSQL

An AI-powered platform that ingests documents, extracts clauses using ML models, and matches each clause to relevant Gmail and Outlook email threads. Provides automated summaries and supports periodic re-sync as new emails arrive.

Noble Royalties | Full Stack: React, FastAPI, PostgreSQL

An operations and data management platform for oil and gas companies, enabling management of wells, sub-units, and commodity transactions with document upload and dynamic spreadsheet creation.

Quantl AI | React Native, Redux, Real-time APIs

A mobile trading application with real-time market data, interactive charts via React Native Gifted Charts, and Redux-managed state. Deployed via TestFlight for internal beta testing.

OMNI CRM | React, Tailwind CSS, Google Ads API, Facebook Ads API

A centralized marketing dashboard for managing Google Ads, Facebook Ads, and SEO from one interface. Features real-time analytics, interactive campaign performance charts, and multi-channel reporting.

TECHNICAL SKILLS

Frontend: React, Next.js, React Native, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI, Shadcn/UI, Redux Toolkit, TanStack Query, Formik, Chart.js, React Native Gifted Charts

Backend: Node.js, Express.js, Python, FastAPI

Databases: PostgreSQL, MongoDB, Firebase (Firestore & Auth)

APIs & Integrations: RESTful APIs, Google Ads API, Facebook Ads API, Gmail API, Outlook API (OAuth), Socket.io, AWS S3

Tools: Git, GitHub, VS Code, Vite, Docker, TestFlight, Google Lighthouse, Figma, n8n

Automation: Built an n8n workflow automation for a crypto mining setup that monitors miner and worker status via the Antpool API and sends automated email alerts to the owner whenever a worker goes offline.

EDUCATION

Bachelor of Science in Computer Science

Graduated: 07/2024

Bahria University • Islamabad, Pakistan
